

### ASSEMBLY DIAGRAM FILTER KIT FOR T24 AND T36 SERIES LIFTKLEEN FOR MODELS C-31626, C31626-41, & C31626-88

#### ASSEMBLY INSTRUCTIONS

1. Apply Teflon tape or pipe compound to all threads before assembling.
2. Assemble per assembly diagram taking careful note of the IN and OUT connections cast in the filter head.

#### OPERATION

1. Loosen the screw to bleed entrapped air.
2. Tighten when liquid appears.

#### NOTE

If leakage occurs, further tightening of the screw will only stretch the screw without improving seal. Remove shell and lubricate O-rings with a suitable lubricant. If leakage continues, replace the O-rings.

3. Replace the filter cartridge when flow drops below an acceptable point.
